

COMPANY OVERVIEW

CyStack Security

General Information

CyStack Vietnam Joint Stock Company (CyStack., JSC) was founded in 2017 by a group of white-hat hackers & information security experts. We act as a member of Vietnam Information Security Association (VNISA) & Vietnam Union for Development of Cyber Safety and Security Products. The company is specialized in developing cybersecurity solutions for modern organizations to fight against evolving threats.

CyStack Vietnam has been a trusted security partner of numerous domestic and international corporations. Creating a connected platform of cybersecurity products to minimize digital risks within organizations at all sizes is our key mission.

Products

WhiteHub

WhiteHub is the #1 bug bounty platform in Vietnam. WhiteHub enables enterprises to connect with WhiteHub researchers (including pen-testers, white-hat hackers & professional bug hunters) all over the world to find vulnerabilities in digital products (i.e. web app, mobile app, IoT, API, source code,...).

See more: <https://whitehub.net>

Cloud Security

Cloud Security is the next-generation solution for website, server, and cloud service security.

By performing security monitoring on defined targets, Cloud Security helps prevent websites and servers from being attacked by the latest vulnerabilities as well as helps prevent data loss in CRMs, cloud services, or enterprise systems.

Endpoint Security

Endpoint security is currently the best solution to manage security for computer networks as it is able to run at kernel level with an ultra lightweight agent which takes less than 1% of system resources. Endpoint Security's detection system is built based on the MITRE ATT&CK® standard.

Team & Findings

Our team members are experienced security researchers which are regular speakers at world-known conferences (Blackhat Asia, Blackhat USA, T2, Xcon) and professional bug hunters who got their names on prestigious enterprises' Hall of Fames (Microsoft, Dell, HP, Deloitte, etc).

We work continuously on the latest technology along with security research to keep our products best in class. We regularly release technical posts, vulnerability findings, advisories and whitepaper in the cybersecurity industry.

Some of our outstanding publications are:

- Unauthenticated Remote code execution vulnerability in D-Link devices (CVE-2019-16057)
- Integer overflow vulnerability in MQTT protocol (CVE-2019-19307)
- Redback: Advanced Static Binary Injection (Blackhat Asia 2020)
- Demigod: The Art of Emulating Kernel Rootkits (Blackhat USA 2020)
- Static Binary Instrumentation (T2 infosec conference)
- Static Binary Injection (XCon 2019)
